## What goes up must come down!

This presentation is based on daily observations and basic experiments of a world artificially changed through SAI chemical fallout. This presentation included examples on how to grow food and work with natural medicine in an altered Environment.

**“We have to rewrite natural medicine as we know it and how it is applied. The causes of todays expressions of illness no longer match. There is still only 5 causes of illness but of a different origin. What was once right is potentially harmful today.”** (Franz Fraitzl)

These are examples of particles that can be found with daily sampling.

The following are publicly acknowledged Health problems directly linked to the SAI chemical fallout.

**Pneumonia-like respiratory symptoms**

**Frequent headaches**

**Sinus congestion**

**Asthma**

**Various allergic reactions**

**Inflammation of binding tissues**

**Metal confusion**

**Depression**

**Unknown ear infections**

**Various allergic reactions**

**Stomach aches**

**Temporary loss of memory**

**Different Alzheimer syndromes,**

All symptoms were found associated with high levels of aluminum and barium in the bodies of the patients. A relationship was found by American scientists between air visibility and human mortality rates that were published by the American Heart Association (AHA) in 2004 [16,17]. Mortality increased mostly among aged persons and infants by 25% when the horizontal air visibility decreased to 2.8 miles (Figure 7). Increasing rates of human mortality Mortality rates in humans increased as function of the decrease in horizontal air visibility caused by SAI chemical fallout dust in USA. (source: American Heart Association AHA, June 1, 2004 [18]).

## Weather Engineering and its Undesirable Side Effects on the Environment, Natural Resources, Agriculture and Human Health

### Abstract

Weather engineering scientists developed a new chemtrail technology applied by jets in the stratosphere for decreasing the global warming. It is based on building synthetic chemical clouds of aluminum oxide as Welsbach particles to reflect the heat coming from the sun back in the upper atmosphere, and thus cooling the air on earth. The applied aerosol mixture contains also nanoparticles of barium monoxide which react with CO<sub>2</sub> when reaching the troposphere turning into barium carbonate and bicarbonate leading to minimization of its content in the atmosphere on the long run. In 2000, the UN approved the first global weather engineering project in the history of mankind to combat the global warming by chemtrail technology for the period from 2000 to 2050 with a budget of US \$ 50 billion (\$ 1 bill/year) financed and completely managed by USA alone. Since the application took place on the global level, climatologists, biologists, agronomists, and medical institutions around the globe recorded and explained undesirable side effects of this technology with severe impact on the weather, natural resources of flora and fauna as well as on human health. These effects could be summarized in the following: 1) Creation of completely new wind directions by induced air depressions. 2) Dehydration of certain ecosystems through the aluminum oxide. 3) Charging giant air electric fields leading to more lightning that induced wild fires in dehydrated forests and range land. 4) Increasing frequency and empowering the natural disasters by seeding air with precipitation nuclei causing floods. 5) Cooling upper air layers over warm water causing hurricanes, tornadoes, and building heavy snow and hail. 6) Decreasing air visibility due to suspended chemtrail particles in the air. 7) Causing health problems with allergic symptoms to chemicals and components of its aerosol. 8) Creation of extreme killer heat waves when reflecting heat back to earth by aluminum oxide. 9) Increasing human mortality in proportion to decreased air visibility; and 10) Increasing risk with calcification diseases caused by the stratospheric Nanobacteria carried down to earth on the chemtrail particles.

I was able to confirm the presence of these particles with the listed expression of symptoms. With basic sampling methods and use of a 100x magnification microscope.

## What can we do?

After over a year of observations, sampling and trial and error I was able to come up with these basic concepts that were effective in dealing with the ongoing artificial changing of our environment that are affecting my personal health on a daily basis.

I notice a regional variation of chemical components and with that there is also a variation of expression of illnesses. My Observations stretch from Ontario to Nova Scotia in Canada. Some observations in Mexico provided from reports and observations in Spain from 2021 to the end of 2022.

The images on the right are samples removed from my eyes. The image on the left is a sample from a solar panel. Irritation, burning and a feeling of having sand in the eyes are some of the symptoms. Some of the ways to remove the hydrogel conglomerate and particles that I have been using, depending on availability are aloe vera gel (only from the plant!) or mineral oil. With a soft cloth, cotton pad or paper tower. Add the aloe gel or mineral oil and wipe it into the affected eye. In a gentle sweeping move

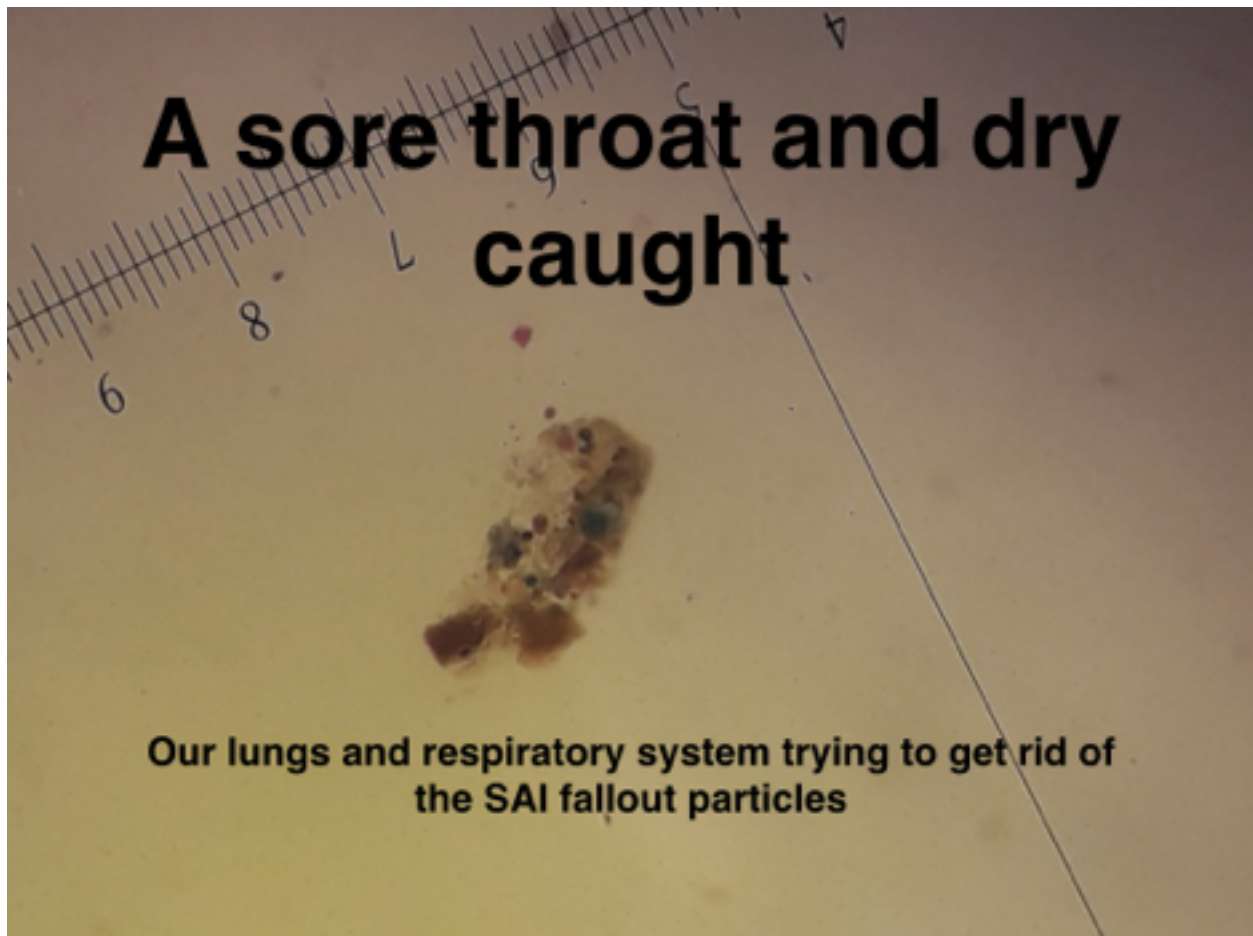

towards the inner corner of the eye, repeating a few times or until a relieve if felt. These are methods that I have been using. I must stress that everyone has a different level of pain and sensitivity and a discomfort can be felt during the application. The mineral oil is better to be used at the end of the day since it leaves a slight film that then over night gets wipe out towards the inner corner of the eye naturally. I have tried other oils like sweet almond oil but found it to be less helpful and irritating. The idea is to capture and remove the particles in general. My methods and products are just an example that I found effective. After you can rinse your eyes with the usual clear water, chamomile, euphrasia, clary sage teas.

Depending on the weather pattern and if its raining the fallout can be severe and the eyes affected constantly. A continuous ongoing routine to provide a reduction in discomfort will have to become part of our life's until the SAI programs stop.

When it comes to symptoms of sinus congestion and a stuffy nose I found that continuous clearing is the only way. What is sneezing? Your body trying to get rid of foreign particles or chemical compounds, not some fake flue or other indoctrinated medical sorcery. Using a nasal rinse or even the use of gently removing the dried secretions the good old fashion ways with your finger. Be careful as it can cause some extra irritation that can end with a short term inflammation. Nothing to worry about when you know that it is mostly caused by the metallic particles scratching the nasal tissue. Sometimes developing into a pimple inside the nose.

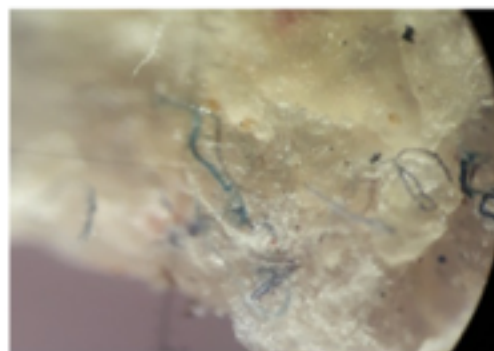

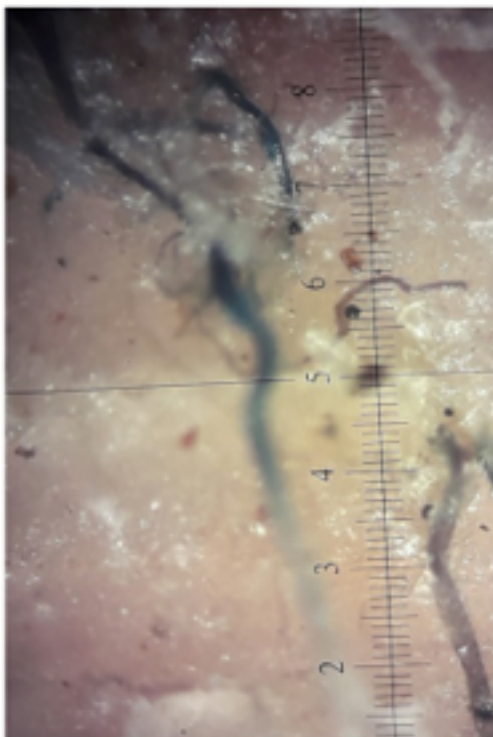

Once the dried up crusty parts are removed one can sense relieve right away. Followed by a nasal rinse with water or a saline solution. As part of a recommended first aid solution according to some MSDS sheets the use of Epson salt or Glauber salt to neutralize the Barium has been recommended. At this point what I find extremely useful are the old remedies of steam baths and the use of essential oils or mouth rinses and gurgles with sage or tree resin tinctures. The use of a steam sauna will also help in opening up the sinus and lungs improving the secretion and helping in expelling the particles, metals fibres and hydrogels. Especially import during the colder seasons to help with the removal of the chemical fallout.

The SAI chemicals when in concentrated form can affect your skin and develop rashes similar to ringworm, eczemas, acne, dermatitis or scabies. Looked at it under the microscope and with a ph strip checking the spot if it is alkaline can help in finding the actual cause.

At this point a frequent cleaning and neutralizing will help in reducing the itch and burning sensation the chemicals cause. Various natural herbs can be applied in liquid or salve form. Some to mention are celandine and calendula. Once the skin is damaged it can turn to a chronic situation and potentially captured by the allopathic medical quacks sorcery. Ending up under the spell of prescription drugs. At this point a change in location I found was the only real solution. After a short time I was able to experience a healing since the fallout was no longer as severe.

Since I was able to find all these chemicals, metals and hydrogel conglomerates on my skin and in my sinuses. All over surfaces, foods and in our water. The obvious assumption was to finding these in my urine. After coming up with a simple way to test for it, my assumptions were confirmed right away. At that point it became very clear for me and realize the greater implications and how much the SAI programs are actually affecting us.

Right away I started to research old natural medical texts. Agricultural research papers and any other direction I could think of in finding information as far as back as Paracelsus. The known fact that there are only 5 causes of illness. Then and now little has changed, but what did change was the origin. And with that I also realized that many of the common used natural healing compounds potentially are now harmful. We don't know what it is that they spray down on us! But what we do know about the compounds and how these react with some of our modern alternative medicines like DMSO and the known caution around it. A fact that has to be brought to everyones attention. As I was able to find out with a simple test that the DMSO at 50% started a violent chemical reaction with some of the hydrogel conglomerates under the microscope. What that means needs to be discovered! Lets be honest, we have been at war for a long time. To assume and to ignore that they will not try to harm us by turning alternative medicine into weapons against us is naive given the known agenda.

At the same time there is hope! As Paracelsus pointed out a long time ago.

**Nature will always provide for the ones who can see!**

When it comes to growing our food I notice a great difference in how well the plants grew when protected from the direct fallout. As simple as a clear poly roof reducing the load and the plants

are able to deal with the chemicals. Interesting to note, my observations in the south of Spain that all the commercial growers now use grow tunnels. Wonder why! At this point in my research, ongoing chemistry analysis is required to determine a plan in neutralizing the chemicals. In the meantime research in resistant plants that not only can cope with the chemicals but also with the stress caused by the weather manipulation and the direct manipulation of natural seasonal weather cycles.

## GROWING FOOD

- Build greenhouses or shelters over grow beds
- Monitor soil and water pH
- Filter rainwater remove metals and fibers
- Check for levels of heavy metals (Barium, Strontium, Aluminum)
- Consider soil amendment to bind metals and salts
- Research resistant plants

A photograph of a greenhouse interior showing rows of plants growing in raised beds. The plants are green and appear to be in various stages of growth. The greenhouse has a curved, arched structure with a clear plastic or poly roof. The ground is dark brown soil.

Here you can see the difference between plants grown in the open field and under a grow tunnel only 50 feet apart. Both germinated in plugs and planted outdoors or repotted. Notice the stunting and burn of the foliage in comparison to the lush green grown under cover.

Unfortunately the rest of our natural environment is equally affected by the SAI chemical fallout. and it shows in the dying off from top down as some of the trees show in the picture below.

In my research I realized that we can overcome all these attacks against us! Some of my experiments showed that our bodies are strong and as long as we have the awareness and the will to fight. The knowledge and awareness of what is going on around us. And I mean not the distraction that we are fed all day long. Here are a few basic points that I realized and have helped in empowering me in this, learning about the SAI and its harmful toxic fallout.

I would like to end here with this short summary of my presentation at CasamanSana. My work is ongoing and new evidence and awarenesses come my way every day. The current goal is to formulate my findings in a guide book available to the public. In it containing a basic understanding and experience based medicines with common natural plant medicines and natural compounds available to everyone. A new way of using old medicine with the understanding of a changed environment. The preparation of the medicines, adaptation and modifications of everyday life to reduce the load of the SAI fallout and how to grow our foods.

This affects us all, even the individuals that are responsible and part of this undertaking against all life. Every individual that is part of the distraction, leading us away from this reality. The immutable natural Law of Compensation takes full effect.

I am inviting **constructive** questions, suggestions, observations and general Inquiries.

My gratitude to CasamanSana and Lula for inviting me to share my current work.

To Henna Maria, for finding a listening ear.

To Miguel for helping in the translation during my presentation.

To everyone that took the time and interest and in asking questions.

**Thank You!**
